

Proudly Serving All of Northern Virginia
Residential • Commercial • Roll-Off
*Recycle today, it's the **AMERICAN** way!*

Enjoy the Benefits of Single Stream Recycling

- **The larger 64-gallon recycling containers make it easier to recycle. Not only can you recycle more but you can also recycle larger items like cardboard that won't fit into smaller bins.**
- **You'll never have to carry a heavy, overflowing bin to the curb again. Our new 64-gallon recycling containers are lightweight, durable, and are designed with fitted wheels and lids that help make recycling easier.**
- **Eliminate the time consuming task of sorting. With 64-gallon recycling containers you can commingle all of your recycling items together in one container.**
- **Recycling is a proven and simple way to give back to our planet by relieving stress on already overused resources, and with our larger containers you can now recycle more items than ever before!**

64-Gallon Recycling Container

SINGLE STREAM RECYCLING

Preserving the green for tomorrow by making recycling easier today.

Single Stream Recycling

Recycling is beneficial to our environment, our well-being, and it is necessary for sustaining our planet's resources for generations to come. At American Disposal, we understand that recycling is not always as easy as just throwing out the garbage. We know how difficult and time consuming it can be for our customers to bundle and separate all of their recyclables each week, but we also know how necessary it is for our environment that we recycle. That is why we have adopted a new recycling method, Single Stream Recycling.

What is Single Stream Recycling?

Single Stream Recycling is an innovative process that allows the consumer the freedom of putting all of their recyclables into the same container, a process called commingling, without the bothersome tasks of bundling and sorting. All sorting takes place at high-tech recycling facilities, where recyclables are separated and processed into various feed stocks to be used in the manufacturing of new and useful products.

How Does Single Stream Recycling Work?

At the state-of-the-art single stream recycling facility, the recyclable materials are introduced into the sorting process via a single conveyor belt. The materials are screened and sorted by various electro-mechanical means: magnets for ferrous metals, eddy currents for non-ferrous metals, air jets for plastic containers, heavy duty rotating screens for corrugated cardboard, etc. The resultant separated materials are ready for baling & shipping to factories to be re-manufactured into new & useful products.

Goals of Single Stream Recycling:

The goal of Single Stream Recycling is to make recycling easier for the consumers and the recycling removal companies while increasing the volume of materials recycled. With Single Stream Recycling, there is no need to have a number of small recycling bins; instead, all recyclables, even bulky items like cardboard, can be placed into one large container. Single Stream Recycling also allows the recycling removal companies to collect additional recycling items that were once unacceptable. As a result, it is easier for consumers to recycle more items now than ever!

Through customer education, expanding the list of materials accepted for recycling and providing large 64-gallon wheeled recycling containers, American Disposal Service is determined to increase the amount of refuse that is recycled. Through this Single Stream Recycling program, it is easier than ever for each person to do their part for our environment by recycling. Please join American Disposal Services and our Go Green Initiative in not only reaching, but exceeding our recycling goal by calling one of our friendly customer service representatives today to ask how you can get involved. We offer Single Stream Recycling to our Residential, Commercial, Roll-Off and Compactor users. Please visit us today on the web at www.americandisposal.com to get more information on how you and your family can get involved.
